

Datasheet MILLI-SCRATCH-TESTER-PREMIUM

In accordance with Standard JIS 3255. The scratch test method consists of scratching on the surface, with a diamond tip on which is applied a constant or progressive load. As the scratching is done, the sample moves under the video system, to examine the different kind of damage done by the tip and correlate it with the load applied. Pictures can be digitized and positioned precisely loading graphs. This standard method allows for comparison of different coatings, substrates, thickness of coating, preparation of surface and scratch resistance of bulk materials.
